# FIELD VIEW

Capture, share and report all field data with a single tool

Viewpoint For Field View™ is a cloud based and off-line mobile forms solution that captures daily logs, punch lists, safety observations, inspections, defect management, commissioning and much more. With Field View, you can choose from a menu of preconfigured forms and/or create forms on your own that reflect your processes — essentially there is no need for IT or system administrator support.

By giving field users an easy-to-use mobile application – available on iOS, Android and Windows tablets – to capture their field observations from anywhere on the job site — even locations without an internet connection — they're able to resolve issues more quickly, improve workflows, reduce risk and deliver higher quality projects.

Project Teams will stay on top of punch lists and track incomplete work, damage, and any other task that requires management, action, or coordination. The solution can be configured to automatically email relevant subcontractors with updated punch lists highlighting necessary remedial work.

Easily capture your field observations on iOS, Android & Windows tablets

Benefits

- Know exactly what's happening on-site at all times

- Standardize your processes and data

- Easily manage punch lists, safety observations, defect management and more

- Quickly assign and resolve issues as they occur

- Get access from anywhere, anytime even when there is no internet connection

With Field View you can also create process controls for repetitive inspection processes. You'll be able to define hold-points and create rules that require forms, tasks, or signatures. With on-screen project drawings, you can identify the precise location of an issue, snap a photo with the built-in camera, and embed it in the document.

Field View Features Include:

- **Capture all field data** - Save time and more efficiently capture information that can be shared with your team including daily logs, punch lists, safety observations, inspections, defect management, commissioning and much more.

  This includes the ability to easily map locations and assets to the most current drawings; quickly customize your own tasks to manage any actionable event onsite such as safety concerns, identify extra work items, or any other task that requires management, action or coordination.

- **Custom configurable field forms** - Create forms on your own that reflect your paper-based processes eliminating clipboard and paper — no need for IT or system administrator support.

- **Preconfigured field forms** - Drastically reduce the time it takes to setup new projects with preconfigured form and task templates. Once deployed, forms can be modified to fit specific processes or data capture needs. Templates include, but are not limited to:

  - Punch Lists
  - Daily Logs
  - Quality Inspections
  - Outstanding Work
  - Change Orders
  - Progress Photos
  - Safety Audits
  - Scheduled Tasks

- **Project Ecosystem Adoption** – Subcontractors, regardless of whether they're using iOS, Android or Windows tablets can download the Field View app to receive the tasks and notifications assigned to them.

- **Daily Field Report** – Quickly generate a summary report that captures daily logs from the field.

- **Work offline** – Optimize productivity; when your work is complete simply sync your data when a connection is available.

- **Team collaboration** – Quickly assign and resolve issues as they occur. Foster better collaboration with your team to more quickly resolve issues and avoid schedule delays.

- **Advanced process management** – Easily define business processes that better reflect the type of control needed in your field operations; facilitates the use of forms, tasks, signatures and comments.

- **Project location set up** - Automatically build your location structure using a BIM file and COBie data to reflect the space and zone information of a project.

- **Automate drawings and locations** - Search for and import drawings from Viewpoint's drawing management solution — Viewpoint for Projects — ensuring your field team is working with the most current drawing version.

An offline mobile solution, Field View is part of a suite of project field tools including project communications, BIM collaboration and mobile field capabilities. Field View helps resolve issues more quickly, reduce risk and deliver higher quality projects.
