

A COLLABORATIVE DOCUMENT CONTROL SOLUTION

Viewpoint For Projects is a document control solution for all construction documents such as drawings, submittals, contracts, photos and building information models (BIM). Construction businesses can share, manage and collaborate on documents in one secure, centrally managed location. Included are capabilities for Document Control, Project Communications, BIM, and mobile field for a powerful level of collaboration.

Not only can you automate and better control processes, you gain mobile and BIM capabilities to complete projects faster and more efficiently while connecting field teams with project information wherever they are. The right software for exceeding project profitability, delivery, and quality expectations, Viewpoint For Projects is simple and easy to use, quick to deploy, and can deliver tangible returns on your technology investment.

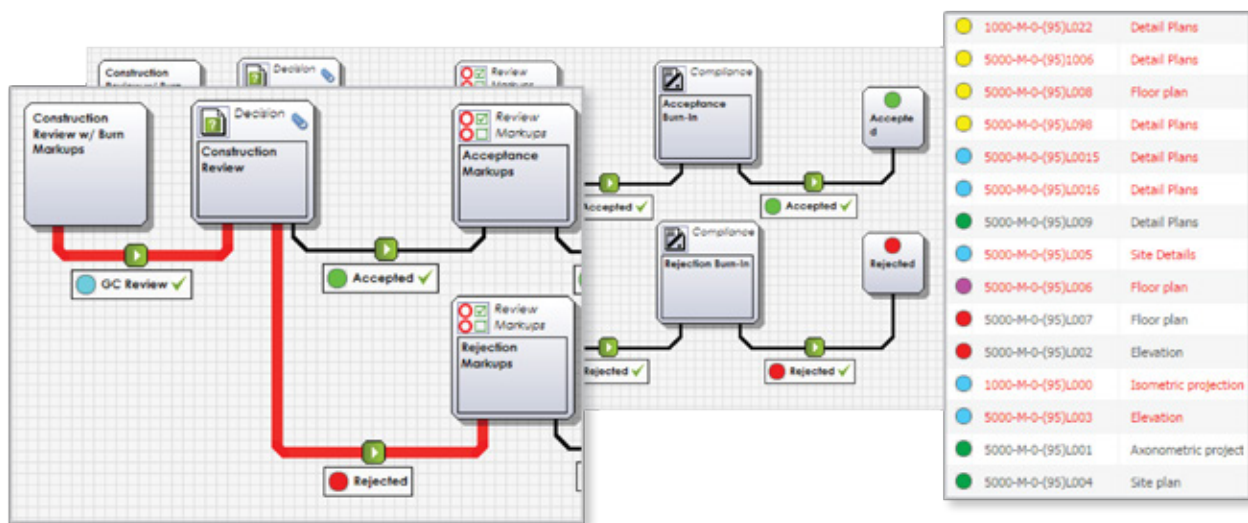

Save time and money, reduce risk and improve control by connecting people, information and processes. Because the technology supports tighter collaboration and transparency at every stage of the project lifecycle, you can be confident that the right information always reaches the right person at the right time.

Collaborative project tools construction businesses use to achieve streamlined processes and clear communication.

Benefits

- Maintain all documents in one secure and centrally managed location
- Control and manage the flow of information
- Real-time document collaboration
- Drives consistency and transparency across projects and teams
- Maintain a clear audit trail and ensure compliance
- Deliver projects with greater transparency and efficiency

Centrally stored drawings and documents can be tracked, controlled & collaborated on via custom workflows for full "ball in court" visibility.

A COLLABORATIVE DOCUMENT CONTROL SOLUTION

Viewpoint For Projects Features

- **Share, control and manage documents** - Track and manage submittals, drawings, contracts, photos and Building Information Models (BIM) and other documents in a flexible, secure environment. Assign, manage and track tasks to completion with overdue, reminder and alert notifications. Includes the ability to archive emails directly into the system.
- **Version Control** - One version of the truth where everyone on a project is working from the very latest version of a document or BIM. Track changes over time and see the mark up history.
- **Viewpoint For Projects Desktop** - Project folders and files are made accessible on your computer — just like any other network drive in Windows Explorer. Delivering the ease of a cloud based file share system with the power of Viewpoint For Project's security, workflows and audit capabilities. Streamline the file creation process, reduce document handling and eradicate information silos.
- **Drag & Drop Upload** - Easily upload single files or entire folder structures with a drag and drop motion. An efficient tool for incorporating subcontractor or supplier documents into the Project Manual or for migrating projects that require mid-project migration.
- **Editing Program Agnostic** - With Viewpoint For Projects Desktop you gain the freedom to edit, revise and mark-up documents and drawings with your favorite editing software. Realize additional time savings by revising and saving in a live environment — no file download/upload required.
- **Viewing and Markup** - View and mark up drawings, documents and photographs, even without access to the software in which they were created. The integrated viewing tool requires no additional software.
- **Configurable document approval and workflow** - Design and implement configurable workflows to standardize and control document, drawing, and e-form processes. Set up custom workflow templates to get a jump start on new projects.
- **Audit Trail** - View exactly what has happened to a document or what a specific user has been doing. Provides an audit trail — even after the completion of the project.
- **Familiar interface** - Project teams will quickly embrace the software driving adoption with internal and external teams.
- **Dashboards and reporting** - Clear view of key project metrics for Project Managers to visualize tasks and activities that require action.
- **Mobile** - With Field Share, project workers from field teams to senior management can easily share and manage documents and capture, upload and distribute photos from their mobile device.

With this real-time collaborative and mobile solution, you'll drive consistent standards and transparency across all of your projects. Viewpoint For Projects connects people, information, and processes, helping businesses to save time and money, improve control, and reduce risk.
